

Cosmetic Dentistry

Modern Technologies like all CAD/CAM systems changes the dental market.

There is no way back, we have to follow this computerised dentistry.

The question is where we do having our positions in esthetic view of conceptions.

With a direct contact and personal treatment planning, we will have an individual solution for the patient. Of course we can use all the technical equipment, it is necessary if we need Zirkon constructions for example. But still there are techniques witch we know over more that 20 years. Today the modern bondings a much better like in the past. In this case we can do constructions without any preparation. These non-invasive ideas following the wishes of the patient having a beauty smile.

As well this lecture contents the philosophy to a special way of creating natural looking dentures. All parts of technical options and materials will be analysed. A new generation of acrylics and confection teeth gives the possibility to create natural looking dentures. How to do will be shown in a step by step documentation. Different cases will explain how important an opaque material can be. Beside the technical parts there are main points of the wishes and emotions from the clients.

The lecture will show possibilities of systems and communication tools for the daily practise. The ripeness of the daily work is no secret any more.

Cosmetic Dentistry can be one new profession of dental business in the future. If we want we can change.....
